Pigment Range

All Elastomers are supplied uncoloured allowing the processor to change the colour by adding a pigment unless the customer requests Notedome to add the pigment during our manufacturing process.

Please select your appropriate colour specifying the RAL number:

Amount

Pigment is added between 0.5 to 5 parts per hundred of prepolymer. Dark colours such as black can be added in lower concentrations (0.5 to 2%) and light colours such as yellow are added in higher concentrations (1.5 to 5%). Usually a maximum of 5% is recommended after which little change in colour occurs. Adding excess pigment has similar effects to adding plasticiser.
